JBoss, Inc. and Unisys Partner to Build Open Source Ecosystem

New agreement allows for enterprise-ready open source J2EE

Atlanta, Ga. and Blue Bell, Pa. February 2, 2005 – Unisys Corporation (NYSE: UIS) and JBoss, Inc. today announced a multi-year agreement for Unisys to offer its enterprise customers production support for JBoss Application Server. JBoss and Unisys engineers will collaborate for successful JBoss deployment on scalable Unisys server platforms.

“Our relationship with Unisys has grown rapidly, and we are pleased with the contributions that Unisys is making to JBoss Application Server software, particularly in the areas of scalability and performance,” said Marc Fleury, president, JBoss, Inc. “Unisys brings a committed, mission-critical mindset to the J2EE marketplace, and we look forward to working with them as we continue to make Professional Open Source safe for the enterprise.”

JBoss provides resources, technology direction and core development for federated JBoss Enterprise Middleware System (JEMS) open source projects with enterprise-class support and services. Unisys has been working extensively with JBoss to integrate JBoss Application Server software across the Unisys server line.

“Unisys is proud to be one of the original members of the JBoss Founder’s Consortium,” notes Ali Shadman, vice president, Strategic Software, Unisys. “The consortium, created in November 2003, helped JBoss achieve certification on the J2EE application development platform. As a founding member of the Consortium, Unisys is committed to the continued enhancement of the open source ecosystem by the availability of the service and support it needs. This next phase of our relationship allows our customers to take advantage of a certified J2EE application server while enjoying enterprise-level production support from Unisys.”

Unisys is a platinum sponsor of JBoss’ first conference of partners, customers and developers, JBoss World, which will take place March 1-2, 2005 at the Omni/CNN Center in Atlanta, Ga.

About JBoss, Inc.

Through its Professional Open Source model, JBoss, Inc. is making open source a safe choice for the enterprise. JBoss provides resources, technology direction and core development for a federation of popular open source projects and stands behind them with enterprise-grade support and services. The JBoss Enterprise Middleware System (JEMS), built on the Professional Open Source model, includes leading technologies like Tomcat, Hibernate, JBoss jBPM, JBoss IDE and the JBoss Application Server, the industry’s fastest growing J2EE application server in use, with over five million downloads. Corporate Express, La Quinta and Nielsen Media Research, among others, rely on JEMS for mission-critical enterprise applications. Partners who embed or bundle JBoss products and resell JBoss services include Computer Associates, HP, Novell and Unisys. JBoss has headquarters in Atlanta, Ga. and Neuchâtel, Switzerland.
